

BLAIN

Thank You for Using Blain Wordpress theme.
© InkHive.com 2013.

This Documentation Contains only basic things at which we think you might get stuck. For further support please use the dedicated [support forum for Blain](#) at inkhive.com

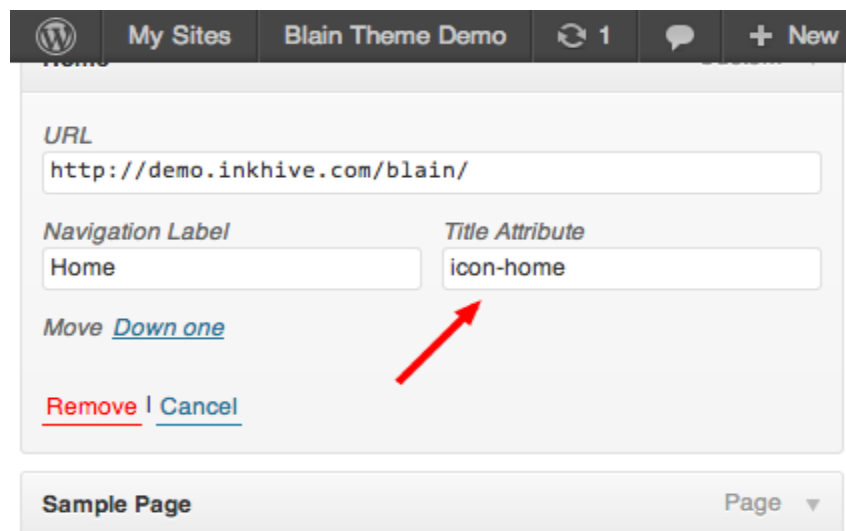

Using the Dropdown Menu

Blain theme uses the Bootstrap 3.0's Mobile Friendly DropDown Menus. Here are some of the features.

- Dropdown Activates on clicks.(There is no hover on touchscreen devices).
- Parent Item can not be used as a link. Because clicking it activates the dropdown. So, it is better to give it a name which describes the other items in the dropdown.
- Only 1 Level of Dropdown is supported. For mobile friendliness.

How to give an icon to menu-items?

This theme uses the font-awesome icons. So select the icon you want to use from the [font-awesome cheatsheet](#). The go to WordPress Dashboard > Appearances > Menus. Select the menu you want to edit. Select the item and in the title-attribute add the class of the icon e.g. icon-facebook, icon-home or icon-file.

How to enable the Slider?

Blain supports upto 5 Sliders which can be purely images, or images with some heading and a

tagline. To use Slider go to Dashboard > Appearance > Blain Settings > Slider Settings.

There you will see options to add 5 sliders. Add the no. of sliders you want to use. Leave the rest blank. For example if you want to use 3 sliders then set up the options for first 3 sliders only.

If you do not want Heading/Tagline for a Slide, leave them blank. But, if you use a Heading it is must to use an URL. As Heading will be linking to an URL.

Using the Slider on Static Front Page

Blain will show the slider on front page and homepage(your latest blog posts) by default. To disable it, you can deactivate the slider from Blain Settings.

Using Slider on Individual Pages

Blain theme supports addition of sliders to pages. To do so, simply go to the page where you would like to display the slider. Click on Edit Page from the WordPress Admin Bar.

Once you are editing the page. On the right you will see an option to change the default templates. To use slider there are 2 options.

- Default Template with Slider - This will show a sidebar on your page.
- Full Width Page with Slider - This will not show a sidebar on the page.

Using Image Thumbnails

Blain implements thumbnail functionality using featured images. So, if you are coming from some other theme then I recommend you to install the [Regenerate Thumbnails](#) plugin and use it to regenerate all the thumbnails with the Blain theme already activated. This will not affect or harm your original images in any way.

If you do not regenerate your thumbnails, then the images will appear ugly as hell. You need not use this plugin if you are using Blain on a New Wordpress site.

Everything else is self-explanatory in the theme. To report bugs or support for this theme, please use [support forum for Blain](#).
